Ali Abdari

Udine, Italy · aliabdari73@gmail.com · aliabdari.github.io

PhD (2025) in Artificial Intelligence with 6+ years of experience developing and deploying deep learning systems for image and video understanding. Expertise in real-time video segmentation and tracking, multi-object tracking, action recognition in raw and compressed video, and multimodal vision-language models. Experienced in adapting, fine-tuning, and profiling large foundation models — including ViT-L-based segmentation models — for latency-constrained inference in PyTorch, ONNX, and TensorRT. Proven track record of translating research into production systems in healthcare and automotive, and publishing at ICCV, ICMR, MMM, IEEE TMM, and ACM TOMM.

Professional Experiences

Computer Vision and AI Researcher — SMC s.r.l., Treviso 2026 — Present

- **Real-Time Medical Image/Video Segmentation and Tracking (Hospital of Padua):** Fine-tuned SAM 3 (ViT-L) with LoRA and SegFormer for surgical/clinical footage | Profiled the inference pipeline stage-by-stage and accelerated it 4× with ONNX and TensorRT (on L4, A100 and L40S GPUs) | Integrated the models into CVAT to semi-automate annotation, cutting labelling time enormously
- **3D Deep Learning for Automotive (Stellantis):** Evaluating B-rep, mesh, and point-cloud DL models for automotive geometry tasks | Benchmarking representation trade-offs for accuracy and inference cost
- **LLM-Based Report Generation:** Built an agentic system that answers natural-language questions over company databases and generates reports; deployed to multiple clients
- **Warehouse Layout Optimization:** Using simulated annealing and Genetic algorithms to minimize item retrieval cost

Computer Vision Engineer — Caica 2022 — 2023

- **Primate Behavior Analysis via Video:** Developed a system for detection, tracking, keypoint detection, and behavioral analysis | Developed for the German Primate Center (DPZ) | Fine-tuned YOLO models | Used DeepSORT for multi-object tracking
- **Fatigue Detection System Using Facial Keypoints:** Developed a fatigue detection system using MediaPipe to detect facial keypoints and measure eye blinks | Applied to factory workers to improve workplace safety
- **AI-Based Assistive System for Patients Using Eye Tracking:** Developed an assistive system using MediaPipe to track eye direction and detect eye blinks | Enabled users to interact with virtual keyboards and type using eye movements

Computer Vision Engineer — Iran's National Elites Foundation 2019 — 2021

- **Traffic and Pedestrian Video Synopsis:** Analyzed movements in urban and non-urban areas using DeepSORT and FairMOT | Detected abnormal traffic patterns | Generated concise summaries of long videos by temporally rearranging moving-object trajectories | Reduced long video sizes to approximately 1/5 of their original size to facilitate efficient review by users

Android and Python Developer — Mosbat Company 2018 — 2020

Python Developer — Vestaak Company 2017 — 2018

Education

Ph.D. in Artificial Intelligence – University of Naples Federico II, University of Udine, Italy 2023 — 2025
Area: Complex 3D Scenes and Metaverses Retrieval using Natural language

M.S. in Computer Science – Kharazmi University, Iran 2016 — 2019
Area: Action Recognition in compressed video

B.S. in Computer Engineering – Kharazmi University, Iran 2012 — 2016

Skills

Languages — English (C1, 7.5 IELTS band score), Italian (C1), Persian (Native), Arabic (B1)

ML/DL Frameworks — PyTorch, TensorFlow/Keras, HuggingFace, OpenCV, Dlib, MediaPipe, NumPy, Pandas, MatPlotLib, SciKit-Learn

Coding — Python, C++, C, MATLAB, SQL

Architectures — Vision Transformers (ViT, ViTDet), SAM 3 / SAM-family, DETR-style detectors, SegFormer, CLIP-style contrastive vision-language models, YOLO, LoRA fine-tuning, 3D point-cloud encoders

Optimization & Deployment — ONNX, TensorRT, inference profiling, FlashAttention, torch.compile, mixed precision, CVAT, Docker, Kubernetes, AWS, Azure ML

Academic Activities and Experiences

Supervision — a Ph.D. student in agricultural and meteorological data processing using ML 2024-2025

Supervision — a researcher in plant genetic data processing using ML 2024-2025

Organization — CV4Metaverse Workshop at ECCV 2024, Italy and CVPR 2025, USA 2024,2025

Organization — Metaverse Apartment Retrieval Challenge at CV4Metaverse at ECCV 2024, Italy 2024

Teaching Assistant — Deep Learning, University of Udine 2023-2024

Computer Vision and Machine Learning Researcher — Kharazmi University 2021-2023

Teaching Assistant — Seven C.S. courses for the B.S. and M.S. degrees, Kharazmi University 2013-2019
